

The A+ certification is a basic certification that demonstrates proficiency with computer hardware and operating systems (OS). The certification helps demonstrate proficiency with the use of computers and related device. Core elements of A+ certification criteria include knowledge of computer anatomy, Operating Systems (OS), and computer data usage elements (including basic structure of binary data and file input/output (I/O)). This course is recommended for participants who have successfully achieved the CompTIA IT Fundamentals Certification or students who have a strong understanding of Information Technology. Certification requires a two-part certification series, which are inclusive within the course cost.
